

## How To Use Our Bot

This Document is provide users with instructions on how to use our Telegram bot to create a range of Ai Telegram bots for their own channels.

At present we are in our free promo only period which will be gradually phased out and will end on 9<sup>th</sup> April 2024. Once the free promo only period has expired instructions will be added to this document for the production of paid bots, at present this only covers the creation of free bots.

To create and use bots you will need to create a telegram bot token for your bot with botfather. If you are creating more than one type of bot you will need a different bot token for each bot you make. Your bot will need to be added to your telegram channel, made an admin and given suitable permissions.

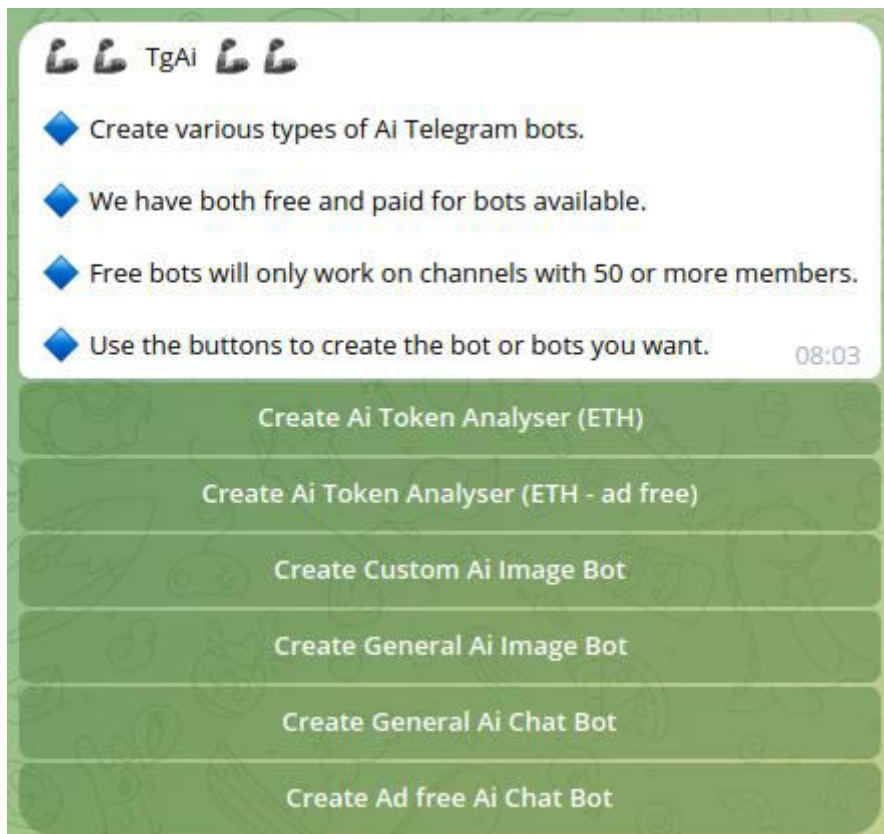

### Types of Bots

Presently you can create three different types of free Telegram Ai bots. These are chat bots, text to image bots and ai token analysis bots for Ethereum. The chat bots contain ads for TgAi, the text to image bots are likely to contain TgAi branding within the users images and the Ai check any token bots contain advertising for TgAi. Paid for versions of all these bots will be available after 9<sup>th</sup> April 2024 without such ads and extra branding.

### Our Creator Bot

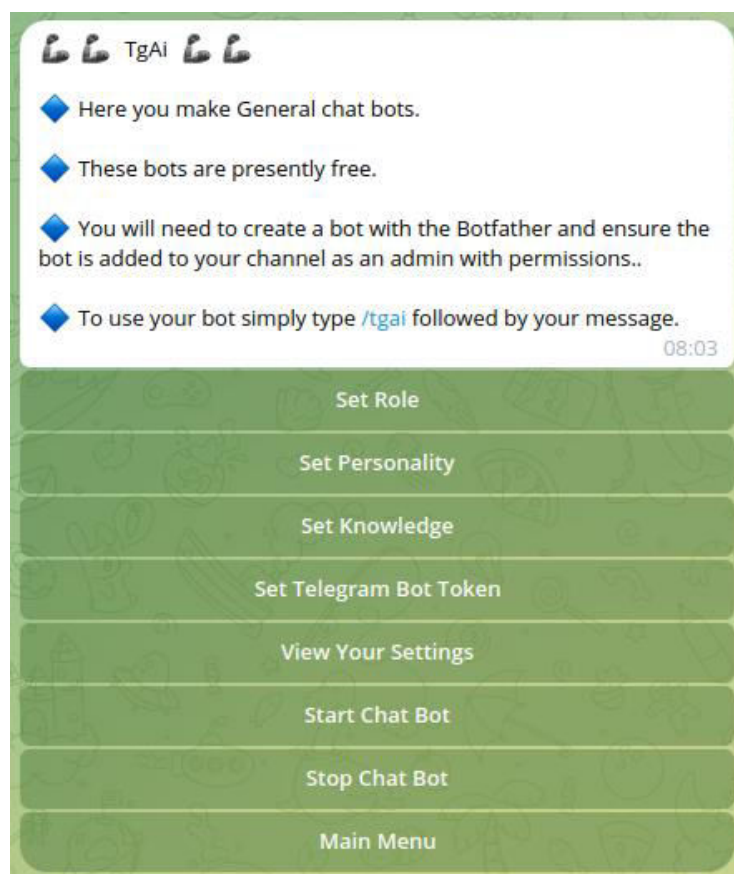

You can use our Telegram bot to easily create your own Ai Telegram bots. Our bot can be found at [https://t.me/tgai\\_creator\\_bot](https://t.me/tgai_creator_bot).

Simply start a conversation with our bot and you will see the following screen:

## How to Create a Chat Bot

To create you free Ai chat bot simply click create general Ai chat bot from the main menu. You will then see the following screen:

You then must complete four settings in order for your bot to run. These are role, personality, knowledge and telegram bot token. Each of these has a button to click and then simply enter the info.

You can click view settings at any point to see your saved settings for each of the 4 settings.

The role is the role your bot will take such as a chat moderator, expert on your project or a comedian who insults users. The choice of role is yours to make simply pick any suitable role you can think of.

The personality is like any real life personality – simply choose what personality you want your bot to have for example friendly, serious, professional, funny etc.

The knowledge is the extra project specific knowledge you want your bot to have beyond the normal ai knowledge. These can be project specific information or details you want passed on to users in any way.

A Telegram bot can be obtained from the Botfather after you set up your bot. It is very easy to set up your own botfather bot and obtain a telegram bot code.

Your bot can be started with the start bot button and you will need to stop it before making any changes to your settings as they will not take effect until you stop and restart your bot. You may stop and restart bots as often as you like.

### **How to Create a Image Bot**

From the main menu you click create general image bot.

You will simply need to click the set telegram bot token button and enter your bot token. Once this is complete simply click start your bot. You can stop and start your bot as many times as you want.
